

SeaPlanner FuelSaver

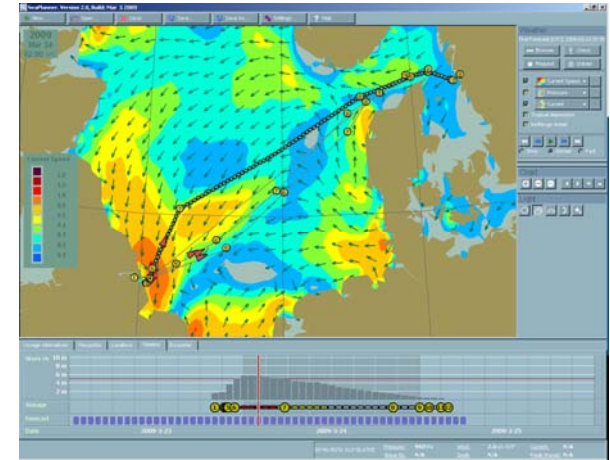

SeaPlanner FuelSaver has been installed on six vessels of the DFDS fleet.

The advanced version is specially suited for Short Sea Shipping and will allow the officers to plan their route taking into account weather, ETA and shallow waters.

With highly detailed weather prognoses of the North Sea and Baltic Sea (supplied by DMI) and with a GPS link, SeaPlanner continuously monitors and guides the Master on the optimum speed and heading.

With this project DFDS, FORCE Technology and DMI will show the potential of the SeaPlanner FuelSaver based upon the experience gained with the programme.
